

Single Sign On

Appendix 1.16
Service Description
October 2020

Introduction

This appendix describes Single Sign On and the requirements imposed on the Customer to get access to the service. Single Sign On is an add-on service to Visma Løn and Visma HR. Access to other Visma Enterprise systems may require configuration at the Customer.

Single Sign On is covered by the Visma Enterprise Agreement, including appendix 9, Terms – Visma Enterprises products and Services.

Single Sign On

Visma Enterprise supports Single Sign On.

With Single Sign On the Customer's employees only need to log on to the Customer's systems once, and have thus access to all systems without being asked for further login for each system / application.

Customer obtains:

- Reduced time spent to enter the password for each employee
- Increased security in relation to inadequate storage of password
- Minimization of administration time to recreation of passwords and support for colleagues in this regard.
-

Requirements

In order to use Visma Enterprise Single Sign On, the Customer must meet the following:

- It requires that the customer has ADFS (Active Directory Federation Service) which is either via on prem or Azure AD.
- Use STS version 2 (or higher)
- Allow sts.bluegarden.dk in firewall (gate 80 and 443)
- Use unique email addresses (in Visma Enterprise's login module)
- Inform Visma Enterprise of STS address (e.g sts.customer.dk) or enclose a Federation MetaData file
- The Customer must know and understand that the Customer's own security level for login in AD is extended to apply to login in Visma Enterprise's products.

Service and Support

The service and support provisions of the Agreement also comprise Single Sign On. Questions about the functionality should be directed to Visma Enterprise's customer center.

Invoicing

Use of Single Sign On is invoiced as subscription, see the Agreement.
